# MOHSAN RAZAQ

Lahore, Pakistan | +92-309-1509833 | mohsansec@gmail.com | linkedin.com/in/mohsanrazaq | github.com/MohsanRazaq | medium.com/@MohsanRazaq

## PROFESSIONAL SUMMARY

Cybersecurity student at the **University of Management and Technology (UMT)** with a **3.71/4.00 GPA** and a **100% merit scholarship**. Builds Python-based security automation and detection projects, with hands-on work in **AWS security assessments**, log analysis, Linux monitoring, and threat-intelligence workflows.

## TECHNICAL SKILLS

**Cloud Security:** AWS, Amazon S3, IAM, EC2, VPC fundamentals, cloud posture assessment, misconfiguration auditing, access control, risk scoring

**Security Operations:** Security monitoring, log analysis, threat detection, detection engineering, threat intelligence, IOC analysis, vulnerability assessment, incident response fundamentals

**Programming & Automation:** Python, OOP, Bash, regular expressions, SQLite, threading, JSON, boto3, AWS CLI, pytest, unit testing, GitHub Actions

**Networking & Systems:** Ubuntu Linux, TCP/IP, DNS, HTTP/HTTPS, IPv4/IPv6, VLANs, NAT64, routing and switching fundamentals, packet analysis, firewall fundamentals

**Tools:** Wireshark, Nmap, Burp Suite, Cisco Packet Tracer, Git, GitHub, VS Code, Streamlit

## EXPERIENCE

**CloudGuard | Independent Security Project | Mar 2026 – Present**

*Python, AWS, boto3, AWS CLI*

- Automated AWS security posture assessments across **S3 and IAM** by implementing **8 security checks** covering versioning, encryption, ACLs, public access, logging, bucket policies, MFA, and access-key usage.
- Prioritized findings using **weighted risk scoring** based on severity and potential business impact; delivered results through **CLI, HTML, JSON, and Streamlit** reports.
- Added **13+ automated tests** across S3, IAM, risk scoring, and posture logic, and integrated them into a **GitHub Actions CI** workflow.
- Built a modular assessment workflow using **Python, boto3, and AWS CLI** to standardize cloud-security findings.

## SECURITY PROJECTS

**LogSentinel — Security Telemetry & Detection Pipeline | Python, SQLite, Regex, SIEM**

- Implemented **3 detection categories**—brute-force attempts, vulnerability scanning, and anomalous traffic—by parsing, normalizing, and analyzing Apache access logs in a SIEM-style pipeline.
- Enabled **time-window correlation** of multi-stage activity by persisting events in SQLite and analyzing related events over time.

**Zero-Trust Ransomware Resilience Platform | Python, Linux, Behavioral Detection**

- Built **event-driven filesystem monitoring** with sliding-window heuristics to identify ransomware-like mass file modification.
- Added suspicious-extension detection, protected-folder monitoring, **lockdown behavior**, backup/recovery workflows, and **HMAC-based authentication**.

## EDUCATION

**BS Cyber Security | University of Management and Technology (UMT), Lahore (2024 – Present)**

**GPA: 3.71/4.00 | 100% Merit Scholarship**

Relevant coursework: Python Programming, Database Systems, Computer Networks, Network Security, Information Assurance, Operating Systems

## CERTIFICATIONS & ACHIEVEMENTS

Google Cybersecurity Professional Certificate | Cisco Networking Academy — Networking Basics (May 2026) | Dean’s Award — UMT | Hack The Box / CTF Practice
